

ETI Stainless Steel Systems

www.efficient-tec.com/ETI-3.html

The main part of the company is our own CNC-manufacturing where most of the products are produced. Our system is based on fitting, screwing and glueing. No mitering, welding and grinding is required. Today we are able to offer a complete system of stainless steel, stairs and balustrades. Our system is also used by shop and booth builders. We continuously improve our products and expand our range.

Stock: We have our products in stock so we can offer short delivery times.

Manufacturing: Haboe means modern CNC manufacturing established in 1989 and is a distributor or industrial customers such as Daimier-Chrysler, MAN-Roland, Heidelberger Druckmaschinen- just to name a few. Since 1996 we are certified according to DIN EN ISO 9001/2000. A separate department which produces stainless steel for our system allows a high grade of flexibility and durability.

web site under construction, coming soon.....
